

Climate Solutions

Most midsize businesses are being asked for Scope 3 numbers by customers, lenders and regulators before they have the data or the team to produce them. We build the baseline from what you already have, then put carbon KPIs where buying decisions actually get made.

The chores

- Customers and lenders want supplier emissions data you do not have yet.
- Spreadsheets of spend and invoices sit unused because nobody has time to map them.
- Sustainability reporting lives apart from procurement, so it never changes a decision.

What we build

Supplier Baseline Generator. Turns spend, invoices and public filings into a supplier-level Scope 3 baseline, with a confidence rating on every line.

Carbon KPIs in the workflow. Supplier carbon intensity shows up in sourcing and review workflows, next to price and lead time.

Supplier engagement packs. Prioritised supplier lists and data requests, so you chase the few suppliers that move the number.

The PAVR Method

P

Pinpoint

Weeks 1 to 2

Map your top suppliers, spend data and the gaps in your Scope 3 picture.

A

Automate

Weeks 2 to 6

The Supplier Baseline Generator fills the gaps from invoices, spend and public filings.

V

Validate

Weeks 6 to 8

Check estimates against supplier disclosures and what your auditors expect.

R

Run

Ongoing

Carbon KPIs live in procurement workflows and refresh every month.

Outcome: A defensible supplier baseline in weeks, and carbon data that shapes buying decisions.

Measured by

Supplier emissions coverage and data-quality score

Why PAVRtech

Industry experts who have run the operation, paired with engineers who built AI at Google, Snapchat and Monzo. A working prototype before you commit.
